

Error-free orders

with AI verification

Spot by Nomagic leverages AI visual verification to inspect every order in real time. It catches errors early, saving money and keeping your customers satisfied.

**Incorrect number
of itmes**

Incorrect item

**Damaged or missed
packaging**

Reduce number of customer complaints

Fewer mistakes mean fewer complaints: boosting loyalty and reducing churn

Eliminate penalties and reshipment costs

Reduce expenses from reverse logistics, re-shipping, duplicate shipments, and penalties for incorrect orders

Ship high-liability goods with confidence

Minimize legal risk for sensitive shipments, such as pharmaceuticals

< 60 days
payback period

potential ROI

SPOT EVERY ERROR

Get the control you need.

Spot features two core capabilities: item counting and item recognition & condition assessment. These are available as standalone solutions or combined.

Item Counting

"How many items are in the box?"

Item Recognition & Condition Assessment

"Does this look like the expected item?"

Primary Use Case

High-volume environments
(E-commerce, Omnichannel retail, 3PL)

High-value industries
(Electronics, Luxury Goods)

High-liability industries
(Pharma, Automotive, Aerospace)

Implementation time

1 week
WMS integration not obligatory

2- 6 weeks
Integration with WMS required

Adapted to your fulfillment process

Leverage use case that is relevant to you, whether you want to only count the items, or also perform full visual verification.

Detailed tracking and metrics

Every decision is backed by clear reasoning, allowing for transparent mistake tracking and a complete audit trail.

Detecting complex and subtle errors

Detect both common and complex errors, from wrong dosages and incorrect quantities to subtle differences between similar-looking items that are often overlooked.

Uninterrupted workflow

Unlike other systems, Spot won't slow you down. It's engineered for speed, checking for errors faster and more accurately than traditional scales and manual checks.

Centered around you warehouse

Spot is part of your warehouse fulfillment process, acting as a final verification step to ensure every order is correct before it leaves your facility.

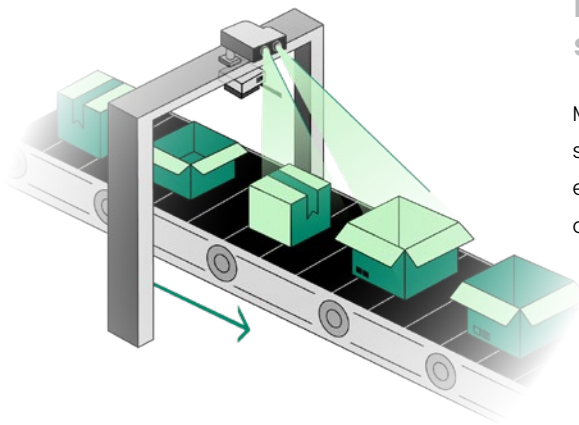

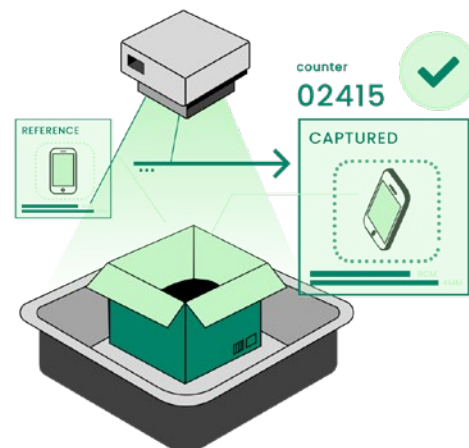

Image capturing and order scanning

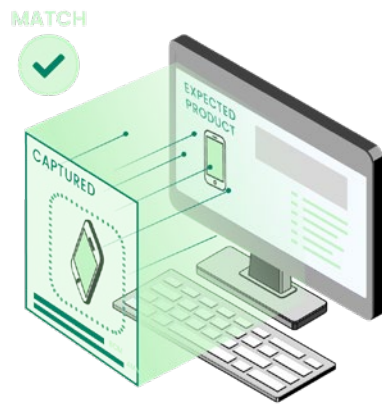

Mounted above the conveyor or picking station, Spot uses advanced vision to pinpoint each carton, bin, or tote as it moves by – capturing photos and scanning every order.

Item Identification

The system carefully analyzes each order, identifying and counting every item – even when they overlap or are partly hidden. It also uses advanced AI to verify that the correct items are packed and to assess their condition.

3

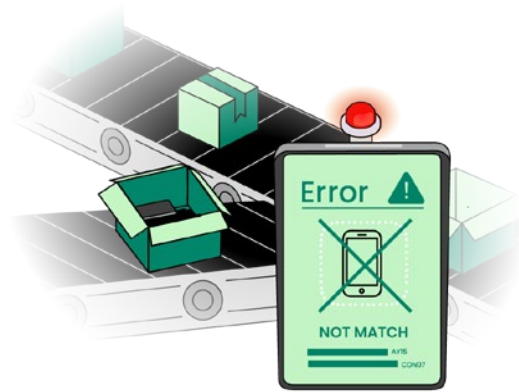

Order Verification

Full verification is taking typically up to 4.5 seconds. The data gathered is compared against the order's expected contents in WMS or is sent to the client's system, depending the use case chosen.

Error Handling

For every decision, Spot provides a clear alert, making it easy for staff to understand the problem. If a discrepancy is detected, the system can flag the order for an exception line and manual review.

Seamless WMS Integration

simple, secure REST API

Turnkey Solution

Standalone software or a complete hardware and software package

Why Spot?

No more incorrect orders.
Just savings and satisfied customers.

AI models trained on millions of SKUs

Spot™ leverages our leadership in robotic item picking. Advanced algorithms verify orders in less than 3 seconds, with no impact on order processing.

Centred around your warehouse

Our system is designed to fit your warehouse without disrupting the usual operations. We also offer advanced customisations for the most demanding use cases.

24/7 operational capability

We guarantee remote support that is ready to resolve issues within minutes and regular software updates with new features for optimal performance.
